Overview

Crestly is an account-based personal-finance and net-worth tracker. It records savings and investments (stocks, crypto, gold), loans and pledges, income and expenses, plus a watchlist — and sums it all up on a single overview dashboard.

Data is stored per account in the cloud (Firebase). No build step, no framework: plain HTML, CSS and JavaScript. The interface is in Hungarian and uses the shared „Studio” design with a warm gold accent, in light/dark appearance.

Philosophy: no server of your own. Static hosting + Firebase (Auth + Firestore) — card-free, maintenance-free operation with cross-device sync.

Goals & audience

Audience Individuals who want to track their entire wealth and finances clearly, in one place — without separate spreadsheets.	Goal A single, always-current picture of savings, investments, debts and cash movements.
---	---

Tabs & features

TAB	FUNCTION
Overview	A summary of total wealth and key metrics.
Watchlist	Watched assets / prices.
Gold	Gold holdings and value.
Stocks	Stock portfolio.
Crypto	Cryptocurrency holdings.
Pledge	Pledged items.
Loan	Loans and repayments.
Services	Subscriptions / service items.
Income / Expense	Recording and summarising income and expenses.
Account	Profile, appearance (light/dark), export/import.

Dashboard

The Overview tab shows the full financial picture in a single view.

Total wealth Total net worth in a prominent numeric display.	Asset split The share of each asset class.	Cards Quick summary cards per tab.
--	--	--

Large numeric displays are auto-sized by fit-text.js to always stay readable.

Architecture & tech

Client

Vanilla HTML/CSS/JS, no build step. Auth + app core, numeric auto-fit, light/dark theme.

Cloud

Firebase Authentication (email/password) + Cloud Firestore. Static hosting for the site.

Script load order: Firebase SDK (app + auth) → firebase-store.js → script.js → fit-text.js.

Data model

Each user's full state lives in a single Firestore document (vaults/<uid>).

```
// vaults/<uid> - main parts of the state
{
  stocks: [ ... ],  crypto: [ ... ],  gold: { ... },
  loans: [ ... ],  pledges: [ ... ],
  watch: [ ... ],           // watchlist
  income: [ ... ],  expense: [ ... ],
  services: [ ... ],
  profile, settings, ...
}
```

The data layer (firebase-store.js) calls the Firestore REST API (firestore.googleapis.com/v1/.../vaults/<uid>) — with no separate Firestore SDK. It loads on sign-in and saves on change.

Storage & security

Private data: vaults/<uid> is read/write only for the signed-in owner.

No public channel: Crestly shares no data and has no embedded widget — everything is behind the account.

Public keys: the Firebase keys are browser-public identifiers; no secret key reaches the client.

Data is tied to the account in the cloud, so the same login shows the same data on every device. On the Account tab, data can be exported/imported as JSON.

Appearance

Crestly's interface is in Hungarian. The appearance is light / dark — the choice is remembered in the browser (localStorage / data-theme). The warm gold-cream palette and classic serif (Fraunces) typography convey a „premium, trustworthy” feel.

Design system

A warm, premium „Studio” design — a gold-cream surface with classic serif headings.

COLOUR PALETTE

	Gold (accent)	#b8912f
	Deep gold	#9a7724
	Green	#3e6b54
	Cream (base)	#efe5d3
	Ink	#241c10
	Line	#e1d2b8

Heading Fraunces · italic accent	Body Inter · 400–700	Label / mono IBM Plex Mono
--	--------------------------------	--------------------------------------

Components: gold accent on buttons and highlights, rounded cards on a cream surface, thin gold separators and invoice-style tables, light/dark theme.

File structure

```
02_Crestly/  
├─ index.html          - the full UI  
├─ css/style.css       - „Studio“ design (gold-cream)  
├─ js/                 - firebase-store, script, fit-text  
├─ firebase/           - Firebase config + rules (CLI)  
└─ favicon.png, logo-mark.png - brand assets
```

Setup

- Firebase: project, Authentication (email/password), fill the config in index.html.
- Publish: upload the files to static hosting (GitHub Pages).
- First use: register an account (email + password), then enter your own data.

Future work

- Automatic price updates for stocks / crypto.
- Wealth history and charts over time.
- Multiple currencies and goal tracking.

Thanks to the modular, framework-free structure, extensions can be added gradually without disrupting operation.
